OPULENTIA.AI

Opulent GTM Master XStrategy

A source-backed operating system for relationship data, signal-led research, human-approved outreach, disciplined sales execution, and compounding account memory.

EVIDENCE -> DECISION -> ACTION -> LEARNING

Prepared 2026-08-05 | Opulent GTM Engineering

THESIS

Engineer the learning rate, not the send volume

Opulent wins when every account interaction improves evidence, message fit, workflow proof, or sales execution. The unit of progress is a better decision, not another automated touch.

PRIMARY OBJECTIVE

Qualified pull

Create credible demand for one workflow and one buyer wedge.

OPERATING MOAT

Account memory

Shared context, corrections, playbooks, and proof compound after every run.

CONTROL POINT

Human approval

Draft freely; gate sends, publishes, enrollments, and CRM overwrites.

Five strategic choices

1 **Start warm**

28 high-context connections before any scale motion.

2 **Narrow the wedge**

Financial services or consulting plus one workflow.

3 **Reference real signals**

Use current evidence, not token-swapped personalization.

4 **Sell proof**

Diagnose, demonstrate one workflow, then operationalize it.

5 **Write back learning**

Every correction changes account memory or a playbook.

EVIDENCE

The strategy is grounded in independent source layers

Mailbox artifacts reveal the operating bottleneck; Opulent product sources define the thesis and offer surface; Field Theory expands the pattern set; repositories contribute production architecture.

Diego mailbox + Excel

2 emails, 3 workbooks, 4,366 network rows, a 336-contact ICP filter, a 135-contact refined list, and 28 warm Jeremy connections.

Opulent product sources

43 rendered GTM slides plus 44 live use cases. Together they define the operating thesis, buyer surface, proof inventory, and expansion paths.

Field Theory CLI

v1.3.22; 869-bookmark local corpus. 58 search lenses produced 178 unique GTM and sales candidates after union and gap checks.

Reference repos

Vercel eve supplies specialist ownership and approval gates. Browserbase supplies staged research, evidence capture, traces, and browser-to-API promotion.

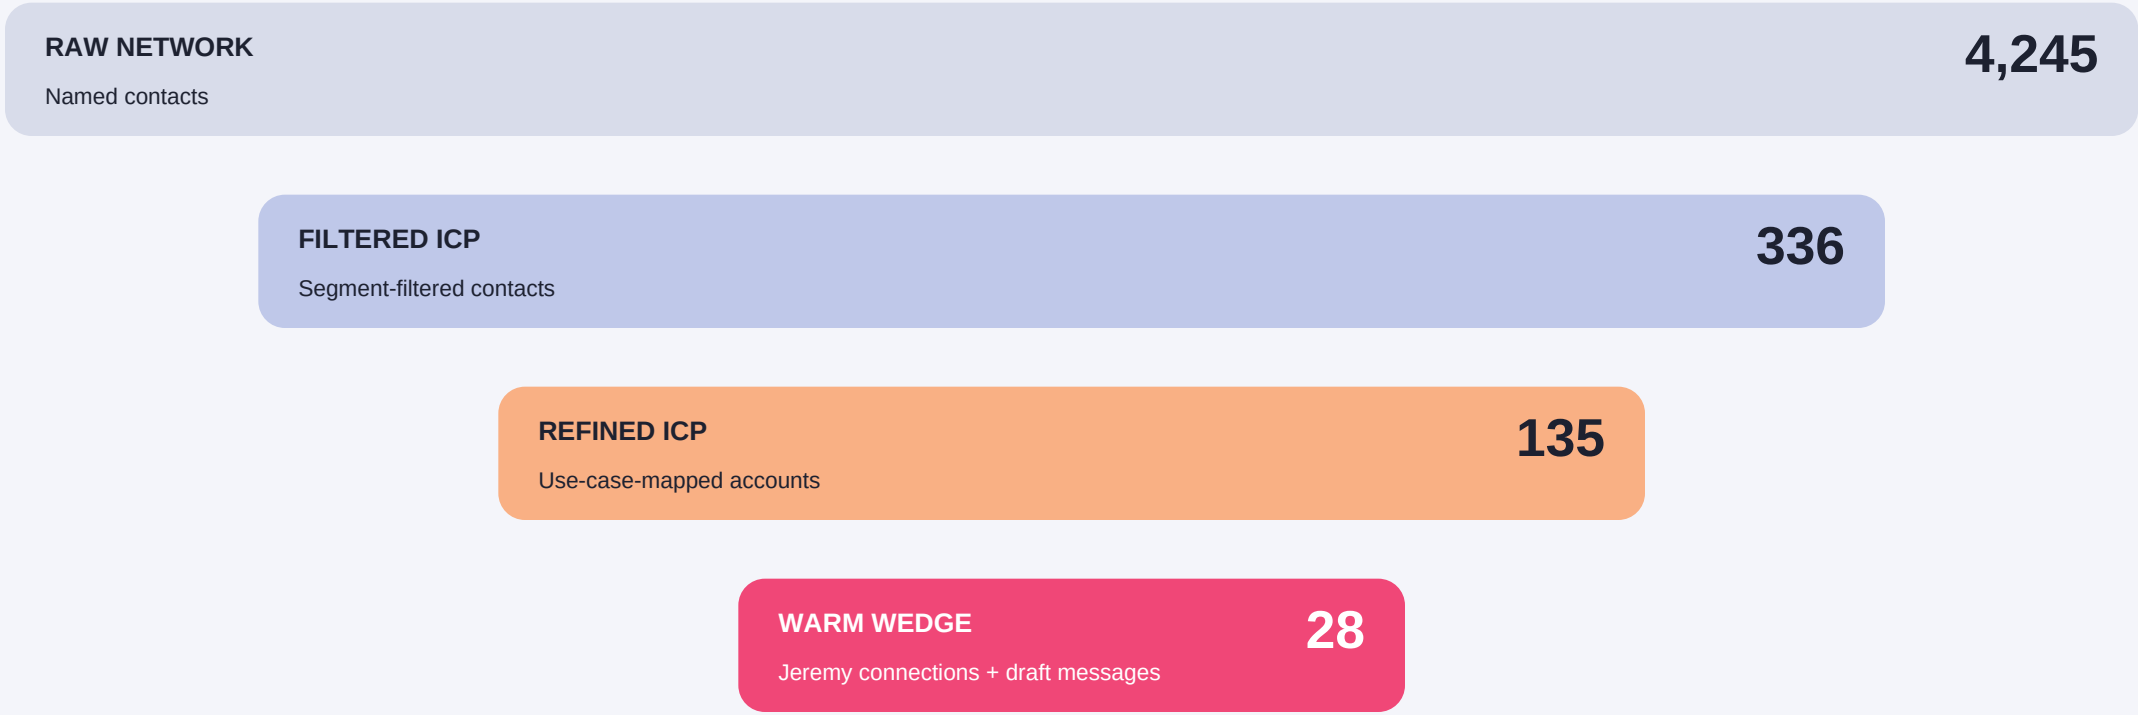

Evidence hierarchy

1	**First-party**	Mailbox bodies, workbooks, source deck, repo code
2	**Observed**	Rendered slides, workbook profiles, commit inspections
3	**External hypotheses**	Field Theory social posts and reported case metrics
4	**Strategy inference**	Opulent sequencing, gates, offers, and scorecard

DATA LADDER

The network is an evidence backlog, not an outreach list

Scale is earned by moving accounts through identity, fit, signal, proof, and ownership gates.

Rule: enrich only after the account passes fit, signal, and owner gates.

Source: Diego Outlook attachments and PII-safe workbook profile. Raw records remain outside the reusable skill.

DIAGNOSIS

The hard problem is reliable enrichment; messaging is downstream

Diego's own notes show that company classification required the most prompting and still left many firms unresolved.

Company identity

Resolve domain, legal entity, and current company before industry or ICP classification. Generic names cannot be classified from text alone.

Evidence-backed fit

Map a use case to observed operations, a current signal, and a reachable owner. A segment label is not enough.

Contactability

The raw network has only 77 email addresses; the filtered ICP set has 7. Do not confuse a LinkedIn URL with a verified channel.

Message generation

Warm LinkedIn messaging was rated easy. Keep it last so the copy reflects verified evidence and sender voice.

Operational consequences

Normalize ownership

Cell color is not a durable owner field.

Preserve provenance

Every enriched field points back to source and capture time.

Keep fact separate

Models may propose inferences; evidence decides truth.

Sample before scale

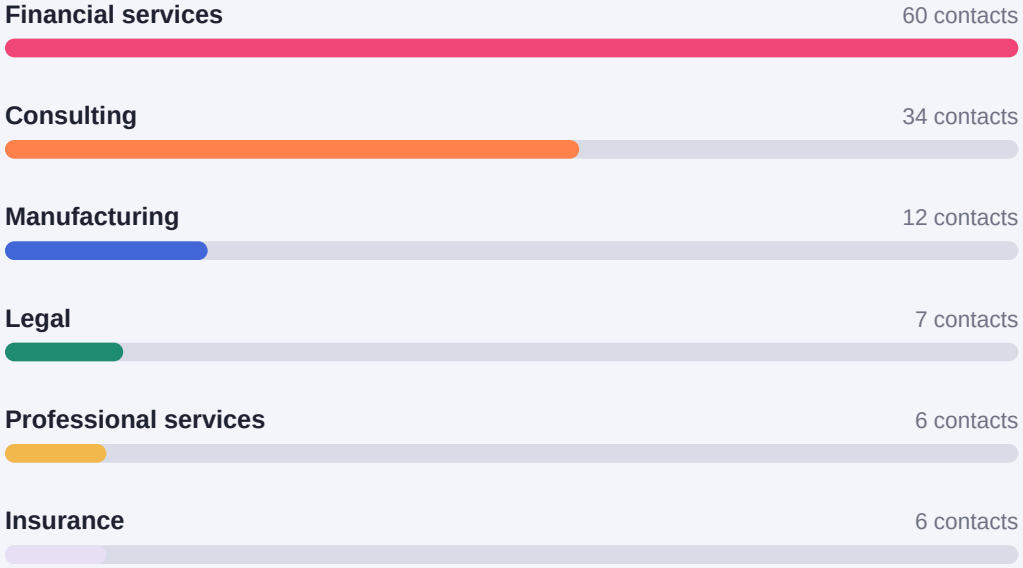

Review accepted and rejected accounts from every batch.

WEDGE

Start where relationship access, proof, and pain overlap

The refined list is concentrated in financial services and consulting. Use that concentration as an advantage, not as permission to stay broad.

Refined 135-contact segment mix

Wedge A

Financial services + deal-flow triage, portfolio intelligence, pre-call briefs, or review-heavy financial analysis.

Wedge B

Consulting + agent-run analysis, proposal support, knowledge synthesis, or client-delivery quality control.

Selection gate

Choose one buyer and one workflow where Opulent can show a complete input-to-reviewed-output proof in days.

Expansion logic

Expand inside the account after workflow proof; expand to another segment only after repeatable pull and a clear counterfactual.

USE-CASE PORTFOLIO

Use one portfolio to narrow the offer, not broaden it

The live catalog is a proof and expansion map. Source-published labels are preserved; buyer, value, lifecycle, and portfolio-role labels are editorial GTM classifications.

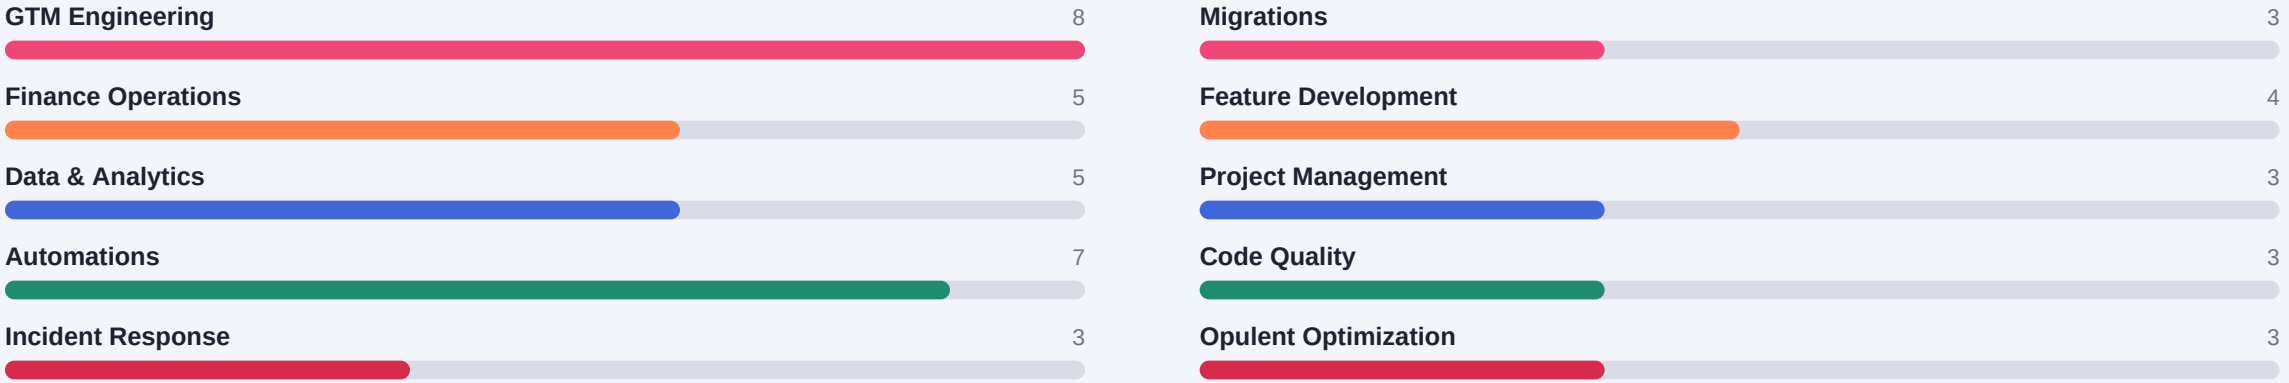

LIVE USE CASES
44
Every index card extracted and source-linked

SITE CATEGORIES
10
From GTM and finance to engineering optimization

FEATURED
13
Observed source signal, not a GTM ranking

PRIMARY WEDGES
16
Editorial shortlist; validate against buyer evidence

Live portfolio by source category

Primary wedge: 16 | Expansion module: 13 | Proof accelerator: 9 | Partner wedge: 2 | Enablement asset: 4

Source: https://opulent-cloud.vercel.app/use-cases/ | Captured 2026-08-05T21:08:59+00:00 | Full observed and editorial labels: references/opulent-use-case-catalog.md

LABELED CATALOG

All 44 use cases, labeled for commercial use (1/3)

Each row shows the published title plus source category and the editorial buyer, value, lifecycle, and portfolio-role labels. Full summaries and capability tags remain in the catalog reference.

1. **Deal Sourcing as a Self-Driving CRM [FEATURED]**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Discover | role: Primary wedge
2. **Event Prospecting**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Discover | role: Primary wedge
3. **Background Account Triage**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Qualify | role: Expansion module
4. **Self-Evolving Pipeline Operations [FEATURED]**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Optimize | role: Primary wedge
5. **Stand Up a CRM and Outreach Pipeline in One Run**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Convert | role: Proof accelerator
6. **Relationship Intelligence for the Warm Intro**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Engage | role: Primary wedge
7. **Opulent x Clodo: People Search into Reviewed Pipelines**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Discover | role: Partner wedge
8. **Competitor Landscape into Living Battlecards**
   GTM Engineering | buyer: Revenue and growth | value: Revenue growth | lifecycle: Enable | role: Enablement asset
9. **Procurement as a Governed Agent Run [FEATURED]**
   Finance Operations | buyer: Finance and operations | value: Operating efficiency | lifecycle: Operate | role: Primary wedge
10. **Order and Invoice Work as One Reconciled Loop**
    Finance Operations | buyer: Finance and operations | value: Operating efficiency | lifecycle: Operate | role: Expansion module
11. **Live SAP Simulation Before Consultants Finish Discovery**
    Finance Operations | buyer: Finance and operations | value: Operating efficiency | lifecycle: Deliver | role: Proof accelerator
12. **Opulent x Ramp: Controllable Autonomous Finance [FEATURED]**
    Finance Operations | buyer: Finance and operations | value: Operating efficiency | lifecycle: Operate | role: Partner wedge
13. **Forecast Cash Flow to the Liquidity Low Point**
    Finance Operations | buyer: Finance and operations | value: Operating efficiency | lifecycle: Plan | role: Primary wedge
14. **Data Analysis as an Agent-Run Workflow [FEATURED]**
    Data & Analytics | buyer: Data and analytics | value: Decision intelligence | lifecycle: Decide | role: Primary wedge
15. **Reason Over Entire Datasets with Async Spawns**
    Data & Analytics | buyer: Data and analytics | value: Decision intelligence | lifecycle: Decide | role: Proof accelerator

Observed fields come from the live Opulent use-case index. GTM labels are deterministic editorial classifications; they are not source-site claims.

LABELED CATALOG

All 44 use cases, labeled for commercial use (2/3)

Each row shows the published title plus source category and the editorial buyer, value, lifecycle, and portfolio-role labels. Full summaries and capability tags remain in the catalog reference.

16 **Ad-Hoc Data Queries in Slack**
Data & Analytics | buyer: Data and analytics | value: Decision intelligence | lifecycle: Decide | role: Expansion module

17 **Customer Health Summaries in Slack**
Data & Analytics | buyer: Data and analytics | value: Decision intelligence | lifecycle: Retain | role: Expansion module

18 **Anomaly Detection Across Connected Data**
Data & Analytics | buyer: Data and analytics | value: Decision intelligence | lifecycle: Protect | role: Primary wedge

19 **Antifragile Deployments**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Protect | role: Expansion module

20 **Autonomous Triage for Knowledge Work Queues**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Operate | role: Expansion module

21 **Daily Sentry Error Fixes [FEATURED]**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Protect | role: Primary wedge

22 **Auto-Fix Failing CI Builds**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Protect | role: Proof accelerator

23 **Run Nightly E2E Tests on Staging**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Protect | role: Expansion module

24 **Fleet-Wide Maintenance Across Thousands of Repositories**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Scale | role: Expansion module

25 **Daily Datadog Health Digest**
Automations | buyer: Engineering and operations | value: Operating leverage | lifecycle: Protect | role: Expansion module

26 **Auto-Investigate Datadog Alerts [FEATURED]**
Incident Response | buyer: Reliability and security | value: Risk reduction | lifecycle: Protect | role: Primary wedge

27 **Auto-Generate Incident Postmortems [FEATURED]**
Incident Response | buyer: Reliability and security | value: Risk reduction | lifecycle: Learn | role: Primary wedge

28 **Debug a Bug Report End-to-End**
Incident Response | buyer: Reliability and security | value: Risk reduction | lifecycle: Protect | role: Expansion module

29 **Migrate 50 Files from REST to GraphQL**
Migrations | buyer: Engineering leadership | value: Delivery acceleration | lifecycle: Deliver | role: Proof accelerator

30 **Create a React 18 to 19 Upgrade Playbook**
Migrations | buyer: Engineering leadership | value: Delivery acceleration | lifecycle: Plan | role: Enablement asset

Observed fields come from the live Opulent use-case index. GTM labels are deterministic editorial classifications; they are not source-site claims.

LABELED CATALOG

All 44 use cases, labeled for commercial use (3/3)

Each row shows the published title plus source category and the editorial buyer, value, lifecycle, and portfolio-role labels. Full summaries and capability tags remain in the catalog reference.

31 **Refactor a Multi-Million-Line ETL Monolith [FEATURED]**
Migrations | buyer: Engineering leadership | value: Delivery acceleration | lifecycle: Deliver | role: Primary wedge

32 **Implement Bookings API from OpenAPI Spec [FEATURED]**
Feature Development | buyer: Product and engineering | value: Delivery acceleration | lifecycle: Deliver | role: Primary wedge

33 **Click-Test Real Product Flows with Computer Use**
Feature Development | buyer: Product and engineering | value: Delivery acceleration | lifecycle: Validate | role: Proof accelerator

34 **Figma to Pixel-Perfect Code**
Feature Development | buyer: Product and engineering | value: Delivery acceleration | lifecycle: Deliver | role: Expansion module

35 **Catch Visual Regressions Before Every PR**
Feature Development | buyer: Product and engineering | value: Delivery acceleration | lifecycle: Protect | role: Proof accelerator

36 **Auto-Triage Bugs via Linear [FEATURED]**
Project Management | buyer: Product operations | value: Planning throughput | lifecycle: Qualify | role: Primary wedge

37 **Turn PRDs into Sprint Tickets**
Project Management | buyer: Product operations | value: Planning throughput | lifecycle: Plan | role: Expansion module

38 **Bulk-Plan Your Ticket Backlog**
Project Management | buyer: Product operations | value: Planning throughput | lifecycle: Plan | role: Enablement asset

39 **Add Unit Tests to Your Payments Service [FEATURED]**
Code Quality | buyer: Engineering quality and security | value: Quality and risk reduction | lifecycle: Protect | role: Primary wedge

40 **Auto-Fix PR Bugs Before Merge**
Code Quality | buyer: Engineering quality and security | value: Quality and risk reduction | lifecycle: Protect | role: Expansion module

41 **Security Swarm: Fix Vulnerabilities at Scale [FEATURED]**
Code Quality | buyer: Engineering quality and security | value: Quality and risk reduction | lifecycle: Protect | role: Primary wedge

42 **Fix Checkout Latency with Three Competing Strategies**
Opulent Optimization | buyer: AI platform and engineering productivity | value: Learning velocity | lifecycle: Optimize | role: Proof accelerator

43 **Test 8 Untested Modules in One Night**
Opulent Optimization | buyer: AI platform and engineering productivity | value: Learning velocity | lifecycle: Scale | role: Proof accelerator

44 **Learn From Past Runs to Sharpen the Next Prompt**
Opulent Optimization | buyer: AI platform and engineering productivity | value: Learning velocity | lifecycle: Learn | role: Enablement asset

Observed fields come from the live Opulent use-case index. GTM labels are deterministic editorial classifications; they are not source-site claims.

OFFER

Lead with one workflow that is slow, costly, or hard to review

The commercial story is diagnosis -> proof -> production -> learning retainer. Tools stay backstage.

1 DIAGNOSE

30-minute workflow map
Inputs, owners, review gates, failure cost

2 PROVE

7-day proof pack
Real artifact, real evidence, human-reviewed result

3 OPERATIONALIZE

Production sprint
Connectors, controls, evaluation, handoff

4 COMPOUND

Learning retainer
New workflows, corrections, measurements, playbooks

Pricing is a hypothesis to test, not a fact to inherit

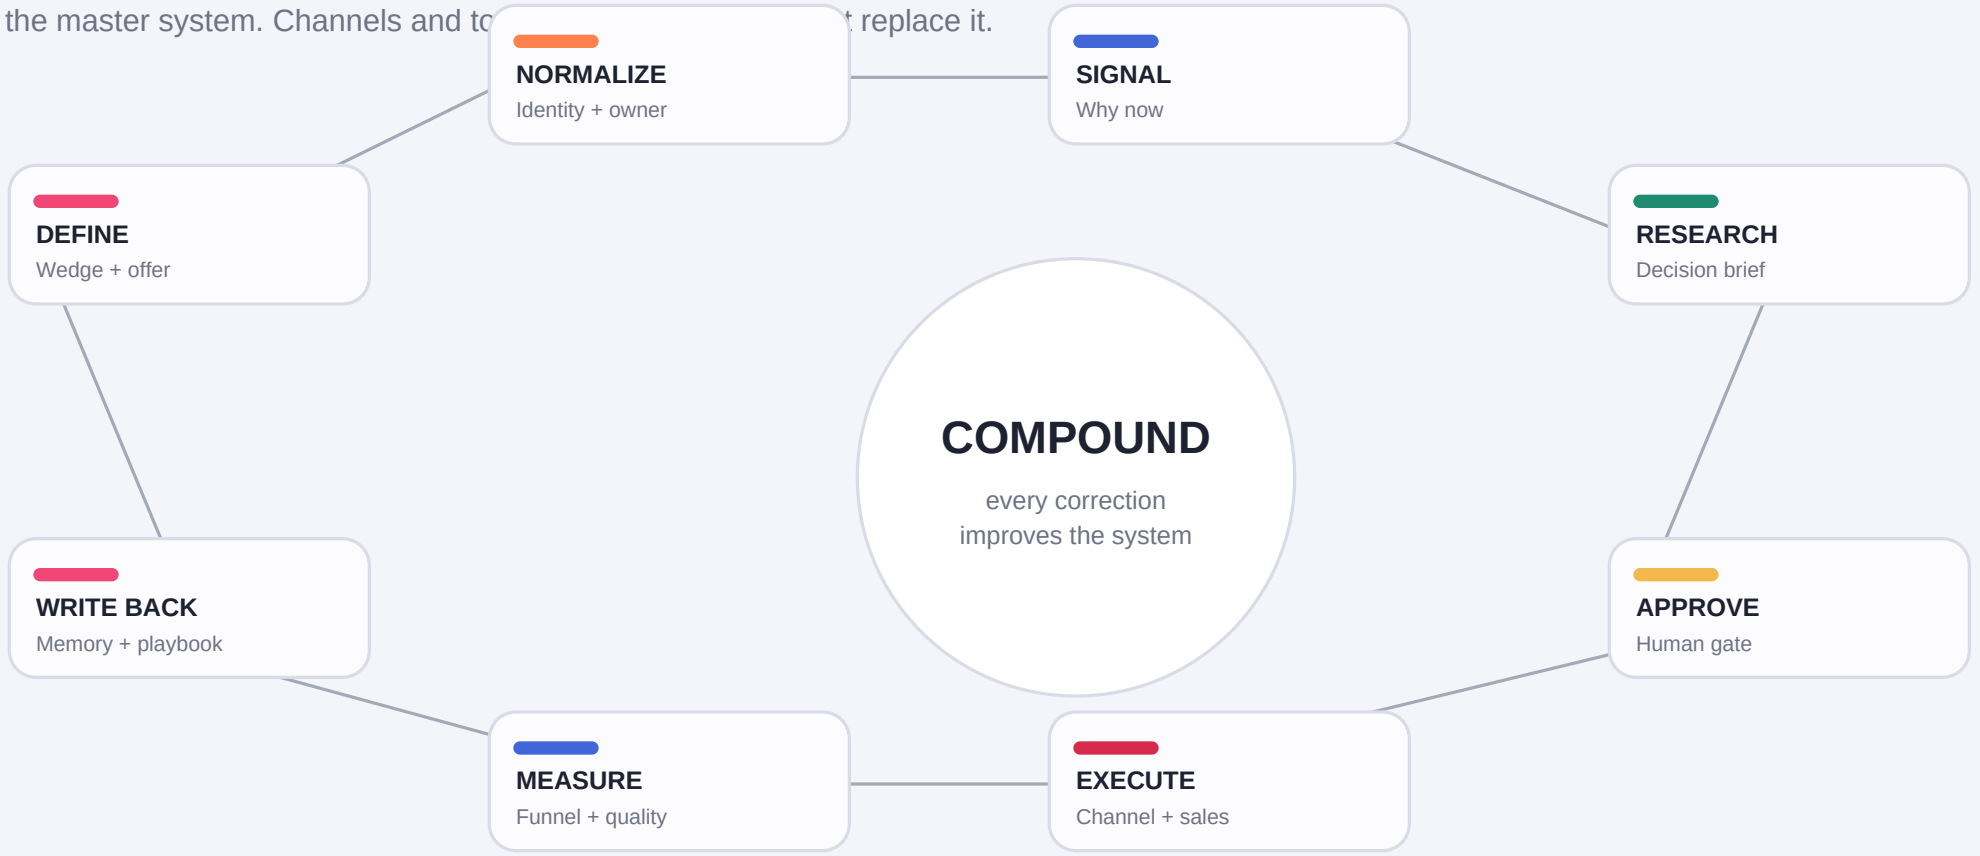

Use paid diagnosis and outcome-based implementation as the initial design. Field Theory operators report $3K-$5K audits and $15K-$30K implementations, but Opulent should calibrate ranges against buyer value, delivery cost, and actual close behavior.

Hypothesis sources: https://x.com/lukepierceops/status/2059606571357720939 and https://x.com/lukepierceops/status/2050545337253675154

LOOP

One closed loop turns every interaction into leverage

This is the master system. Channels and to[illegible]t replace it.

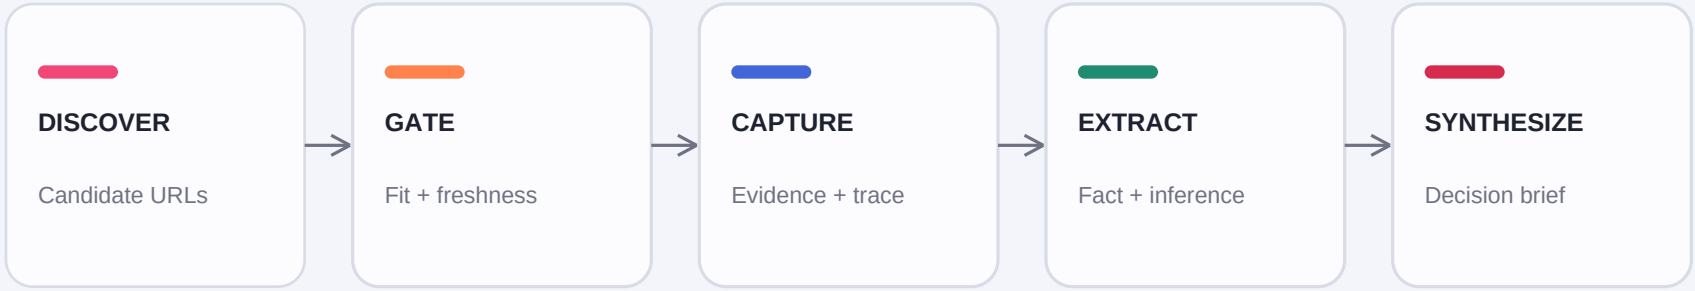

SIGNALS

Build a signal factory before an outbound factory

The system watches a few high-information sources, gates candidates, captures evidence, and only then drafts action.

- Contracts / filings
- Funding / hiring
- Tech / reviews
- Events / partners
- Active LinkedIn

Graduation rule

Exploratory browser steps stay traceable. Stable repeat interactions graduate to typed APIs with redaction, schema validation, and tests. Dynamic UI claims keep screenshots or traces; static claims keep attributable URLs.

Reference patterns: https://github.com/browserbase/skills/tree/main/skills at commit 6afe8663693372e59e167dfa5be37932af09ae3d

ACCOUNT ACTION

Every account brief must support a decision

A good brief answers why this account, why now, what to propose, and what evidence would prove the hypothesis wrong.

WHY THIS ACCOUNT

Fit, relationship, segment

WHY NOW

Current, attributable signal

WORKFLOW

One reviewed outcome

BUYER

Owner, champion, blocker

COUNTER-EVIDENCE

What could disconfirm fit

NEXT ACTION

Safe, low-pressure step

Message contract

1. Observed signal or real relationship. 2. Likely operational consequence as a hypothesis. 3. One useful workflow or proof. 4. One low-pressure ask with permission to decline.

MOTIONS

Run four motions from the same evidence spine

Warm relationships lead; signal-led outbound adds reach; authority compounds trust; partners and events create distribution without list saturation.

1. Warm network

Pilot 10-15 accounts per week from the 28 warm connections. Human review every message. Use discovery to validate the use-case map.

2. Signal-led outbound

Monitor two or three source families per wedge. Contact only when fit, evidence, freshness, and a safe channel are present.

3. Authority

Turn delivery artifacts into founder and employee field notes, technical explainers, case proof, and useful ideas for the same buyer wedge.

4. Partners + events

Activate agencies, integrations, referrals, platforms, affiliates, and high-density events. Agents prepare evidence; humans build relationships.

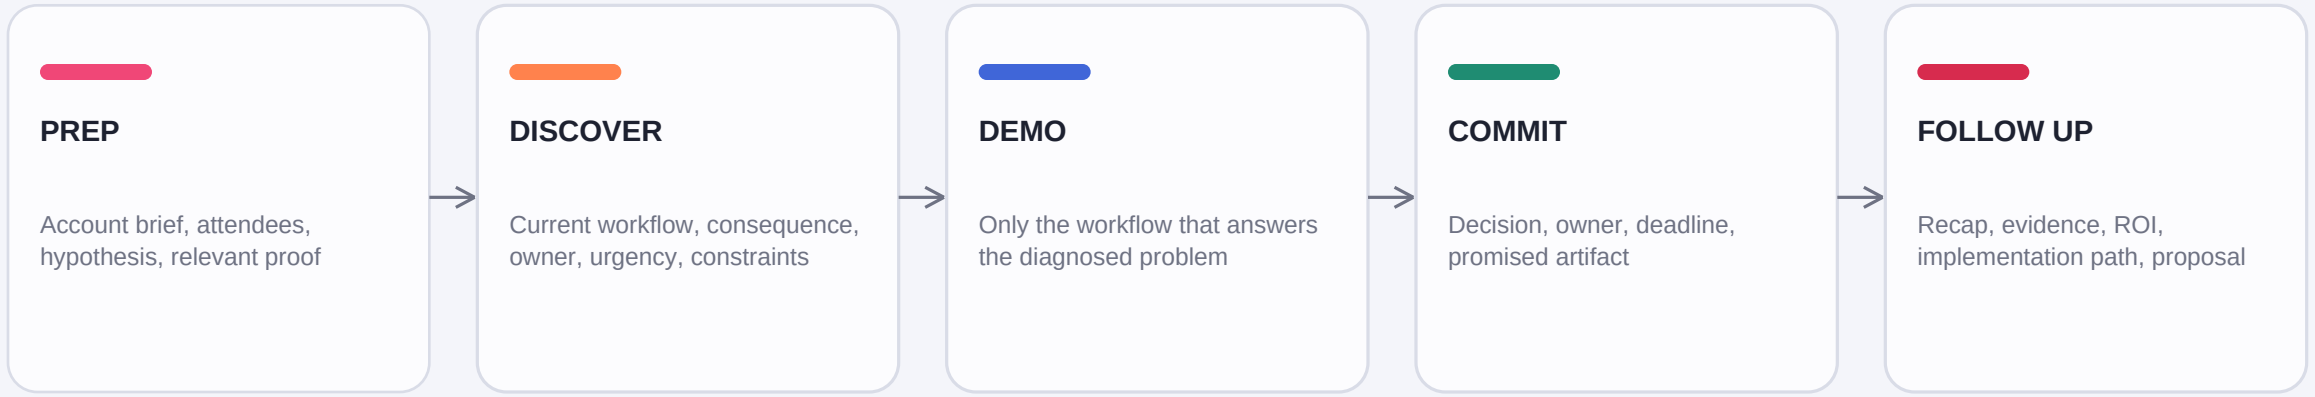

Channel rules

- **One owner per channel**
- **One proof per claim**
- **One next action**
- **No irreversible action without approval**

SALES

The sales process is the proof-delivery system

AI should eliminate dropped context and commitments, while humans own diagnosis, trust, judgment, and commercial decisions.

No forgotten commitments

Meeting notes, CRM state, inbox, and internal messages should converge into one commitment log: who promised what, by when, what evidence is missing, and what the seller must do next. Automated reminders are useful only when the underlying commitment is explicit.

Field Theory examples: https://x.com/fivosaresti/status/2072032494912704777 and https://x.com/jasonlk/status/2060878172632105002

OPERATING MODEL

One lead, clear specialists, one shared commercial context

Borrow the strongest architectural constraint from the Vercel eve template: shared state has one owner, briefs are self-contained, and irreversible actions are gated.

Reference: https://github.com/vercel-labs/marketing-team-eve-template at commit 7ccaa5f406edf179cbef4d81bcb200fd3ee9da67

90 DAYS

Sequence proof before scale

Each phase has an exit gate. Calendar progress never substitutes for evidence.

Default constraint: expand only one dimension at a time

More accounts, another signal source, another channel, or another segment - never all four in the same experiment.

CADENCE

A weekly rhythm keeps research, sales, and learning synchronized

The cadence turns the strategy into an operating habit and makes approvals visible.

MON	TUE	WED	THU	FRI
Evidence refresh Choose hypothesis	**Account briefs** Approve target set	**Outreach + prep** Execute safely	**Discovery + demos** Capture commitments	**Review + write-back** Keep, kill, revise

Approval gates

- **Identity + recipient**
- **Evidence freshness**
- **Message fit**
- **Channel basis**
- **Sender + next action**
- **CRM write-back**

MEASUREMENT

Measure data health, funnel quality, learning speed, and economics

Activity counts are diagnostic. Commercial decisions require quality and downstream outcomes.

Data health

Identity coverage, dedupe rate, domain resolution, verified channel coverage, current signals, owner coverage, evidence freshness.

Research quality

Candidate acceptance, unsupported claims, false positives by source, signal-to-brief latency, correction reasons.

Funnel quality

Approved targets -> positive replies -> discovery -> qualified opportunity -> proposal -> win, by cohort.

Learning + economics

Experiments per week, playbook reuse, correction capture, human minutes, cost per accepted account, payback.

Experiment rule

Baseline first. Change one variable. Define the cohort, leading indicator, revenue-quality outcome, guardrail, stop date, and keep-kill-revise decision before execution.

North-star operating metric

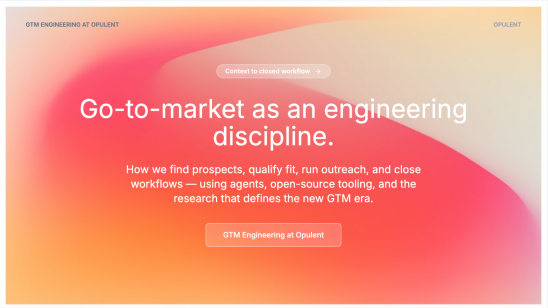

Qualified pipeline created per human hour

Guard with win quality, evidence accuracy, and customer payback.

DECK INHERITANCE

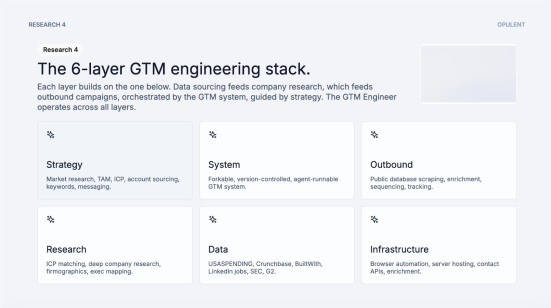

The master strategy preserves the strongest Opulent GTM patterns

The source deck was rendered slide by slide. These four representative frames anchor the strategy's visual and narrative inheritance.

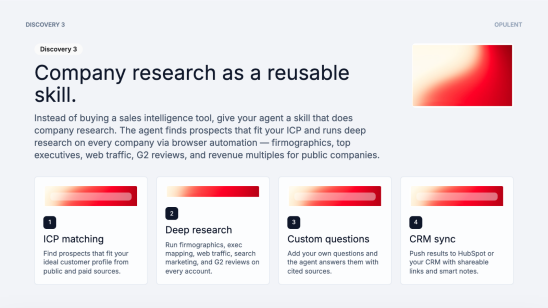

GTM as engineering

Source slide 1

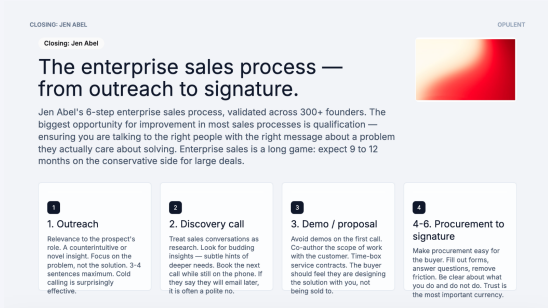

Six-layer system

Source slide 8

Reusable company research

Source slide 17

Sales from outreach to signature

Source slide 39

What was retained

Outcome delegation, signal-led research, minimal modular infrastructure, bounded outreach, disciplined discovery, relevant demos, proof, pricing, and reviewed delivery.

What was added

Diego's actual data ladder, PII and provenance gates, explicit ownership, 90-day sequencing, weekly approvals, experiment contracts, and learning economics.

RISKS

Five failure modes can erase the advantage

The strategy is only useful if its non-negotiables survive pressure to move faster.

Raw-list automation	High volume from weak identity and stale fit creates noise and reputation risk.	**CONTROL: Gate by identity, fit, signal, owner, and channel basis.**
Synthetic confidence	A filled cell looks true even when classification is inferred.	**CONTROL: Preserve evidence, confidence, expiry, and human review.**
Specialist overlap	Multiple agents rewrite positioning and lose accountability.	**CONTROL: One owner per shared artifact and one-level delegation.**
Unapproved action	A good draft becomes a bad external effect.	**CONTROL: Require human approval for sends, publishes, enrollments, and overwrites.**
Vanity scale	More sends and meetings hide weak opportunity quality.	**CONTROL: Track adjacent-stage conversion, disqualification, economics, and learning.**

NEXT 10 DAYS

Turn the strategy into one controlled revenue experiment

The immediate goal is not to automate the GTM stack. It is to produce one trustworthy learning loop with a real buyer cohort.

1 Select

Choose financial services or consulting plus one workflow and buyer.

2 Normalize

Convert ownership colors into data; resolve company domains for the 28 warm contacts.

3 Brief

Create 10 decision-ready account briefs with current signals and counter-evidence.

4 Approve

Review sender voice, channel basis, message, and CRM write-back for each.

5 Execute

Run outreach, discovery, and one relevant proof. Record commitments immediately.

6 Decide

Compare with baseline; keep, kill, or revise the wedge-message-workflow play.

Decision at day 10

Do we have evidence of qualified pull worth compounding?

THE OPERATING PRINCIPLE

Research deeply. Narrow the wedge. Prove one workflow. Gate external action. Write every correction back into the system.

EVIDENCE -> DECISION -> ACTION -> LEARNING
